

A little home for your day.

Keep the links, files, images and ideas you want to come back to. DaBin saves what you drop or paste into a personal daily board, right on your Mac.

START WITH THREE SMALL MOVES

1

Meet your robot

Move your pointer to any screen corner. Your little robot peeks out when you need it and stays hidden while you work.

2

Drop or paste

Drop one or several files onto the robot, or hover and press **Control-V** or **Command-V**. Files from one move stay together in one card.

3

Open your day

Double-click the robot for Daily, with the newest captures first. Click the **date** to see seven days side by side.

Keep the good stuff close.

Find it again

Filter by links, files, media or tasks. Search shows matching dates, with one capture before and after each result.

A thought or a nudge

Use **Comment** or **Reminder** on any capture. Press **+** to add a task, then toggle **Task** to **Completed** when you're done.

Made to fit your day.

Drag the logo to move your board. Settings controls Dark mode, transparency, theme color and GitHub updates. Captures stay local, organized by year, month and day.
