

Everything your day leaves behind, saved in one glance.

Capture quickly. Keep it with a project. Take the next action. Find your work again, all on your Mac.

START HERE

1

Reveal

Move to a corner, or choose the camera island home.

2

Feed DaBin

Drop or paste into the robot or Inbox.

3

Open your day

Double-click the robot. Choose Inbox, Today or Projects.

EVERYTHING DABIN CAN DO

Newest captures appear first

CAPTURE ANYTHING

- Drop or paste text, links, media, PDFs and files into the robot or Inbox. Items added together share a card.
- Hover the robot: **Control-V** or **Command-V**. Add offers notes, tasks and file import.
- DaBin copies files, fits previews and keeps time, type, source app and source path when available.

INBOX: YOUR DAY AND WEEK

- First launch opens **Inbox**. To organize holds unfiled captures from every date.
- Day / Week** browses the calendar. Empty days stay hidden; newest captures come first.
- Filter by All, Text, Links, Files, Media or Tasks. Move between displays; drag any corner to resize.

FIND AND REUSE

- Command-K** searches the full archive. Weekly offers Search Day and Search Week.
- Find filenames, links, comments and content. Local recognition reads images, screenshots, PDFs and text documents.
- Show nearby captures adds context. Copy cards or grouped files; inspect source and record paste destinations.

PROJECTS AND EXPLORER

- Group resources in color-coded projects. Project identity sits above content and frames active-project cards.
- Preview, copy or drag files to other apps; open, reveal or copy paths. Gather a shelf and export a ZIP.
- Search clipboard history, pin content and name snippets. Copy as plain text; keep autosaving project scratchpads.

TASKS, REMINDERS AND FOCUS

- Turn any capture into a task. Add comments, files and checklist steps; keep the original content.
- Set priority, effort and repeat rules. Plan separately from deadlines: reorder Today, reschedule or mark Completed.
- Remind by date or countdown. Start, pause or reset a focus timer; finishing it does not complete the task.

COPY OR EXPORT

- More copies or downloads a selected day or the full displayed week.
- Exports ignore active filters, include every stored action and sort chronologically.
- Copy and download match: date-named UTF-8 text with time, type, source, content, comments and recognized text.

OPTIONAL AUTO CAPTURE

- Off by default.** Choose Clipboard, Screenshots or both. Saves future changes, never existing contents.
- DaBin and common password managers are excluded. Choose a screenshot folder; pause anytime.
- Choose a project to file new saves there. The robot waves its color-matched sign; four saves in an hour form a summary.

KEEP CONTROL

- Set dark mode, theme, transparency, tooltips, shortcuts and Quiet mode. Reduce Motion is respected.
- Quiet Orbit lives by the island or a corner. Minimize cards; trash is recoverable with Undo and Recently Deleted.
- Back up or restore from More. Settings has clipboard retention, Get updates and Quit DaBin. Source files stay untouched.

PRIVATE AND LOCAL

Readable Year / Month / Day folders on this Mac. No account, analytics, ads, cloud sync, external AI, or automatic uploads. Link previews connect only when you enable them; Quit stops every background activity.
