

Everything your day leaves behind, saved in one glance.

Drop it. Paste it. Find it later. DaBin turns the things you touch on your Mac into a private daily board.

START HERE

1

Reveal

Move to a corner, or choose the camera island home.

2

Feed DaBin

Drop or paste into the robot or Daily window.

3

Open your day

Double-click the robot, then browse Daily or Weekly.

EVERYTHING DABIN CAN DO

Newest captures appear first

CAPTURE ANYTHING

- Drag or paste text, links, media, PDFs, documents, or files onto the robot or Daily.
- Hover the robot and press **Control-V** or **Command-V**; use **+** to create a task.
- Items added together share one card; previews fit and originals stay untouched.
- Stores time, type, source app, and source path when available.

REVISIT YOUR WORK

- First launch opens Daily; later, use the robot or menu bar to return.
- Daily has date navigation. Weekly ends on your selected date and hides empty days.
- Filter by **All**, **Text**, **Links**, **Files**, **Media**, or **Tasks**. Notifications gathers reminders.
- Move the board anywhere; DaBin remembers its position. Empty views show the bored robot.

FIND ANYTHING

- Search the archive, a selected day, or the displayed week.
- Results open on the date with the same-day capture immediately before and after.
- Local recognition reads screenshots, images, PDFs, and supported text documents.
- Search also checks filenames, comments, and links. Copy recognized text or rebuild the index.

WORK WITH EACH CAPTURE

- Copy original text, links, tasks, or saved files from the card; grouped files copy together.
- Add a comment or reminder, preview content, open the original, or reveal its saved folder.
- View and copy source details when available.
- Minimize, expand, or remove DaBin's saved card.

TASKS AND REMINDERS

- Create a task with **+**, or turn any capture into one without losing its content or date.
- Toggle red **Task** to green **Completed**.
- Open tasks without reminders carry forward at the top with their original creation date.
- Reminder tasks appear at the top only on their reminder day; macOS notifications are optional.

COPY OR EXPORT

- Daily offers Copy Day or Export Text File; Weekly copies or downloads a chosen day or full week.
- Exports ignore filters, include every action, and sort chronologically.
- Includes time, type, source, text, captions, and recognized text when available.
- Copy and download output match; downloads use UTF-8 and clear date-based names.

OPTIONAL AUTO CAPTURE

- Off by default. Saves only future clipboard changes and chosen-folder screenshots; never existing content.
- DaBin and common password managers are excluded by default. Pause or stop instantly; duplicates save once.
- Four automatic saves in one local clock hour form an expandable summary; success triggers the robot and burst count.

ROBOT, SETTINGS AND MENU BAR

- Corner or camera island home; the robot tracks, digests, and rotates through 12 success reactions.
- Dark mode, theme color, 35-100% opacity, Reduce Motion, and Reduce Transparency.
- Menu bar: Daily, status, pause or resume, Settings, and Quit. Direct builds add Get updates; Store builds update through Apple.

PRIVATE AND LOCAL

Readable Year / Month / Day folders on this Mac. No account, analytics, ads, cloud sync, external AI, or automatic uploads. Link previews connect only when you enable them; Quit stops every background activity.
